

Build an online book sales website on the ASP.NET platform

Nguyen Thien Quang

Abstract: In the context of increasing demand for online shopping, this topic focuses on building an online book sales Web system using ASP.NET technology. The project aims to create an efficient digital platform to provide convenient shopping services for users and manage the business operations of publishers or bookstores. Through the research and implementation process, the topic applies a method combining theory with experimentation to ensure the system's comprehensive functionality and ease of use. The expected results will provide a feasible technical solution for expanding online book sales, while contributing to the development of information technology applications in the publishing industry.

Keywords: Online book selling website, ASP.NET, digital platform, book management, online business
