

Building a website to manage teacher and student information for Hung Long Secondary School - Doan Hung - Phu Tho

Tran Trung Thai

Abstract: In the current context, managing teacher and student information has become more important than ever. This topic aims to solve the problem of organizing and storing information data effectively to support teaching and learning activities at Hung Long Secondary School. Through the research process, we combine both information management theory with practical experience in building a web application. The project is expected to provide a useful solution for quickly and accurately tracking and updating information, thereby improving the quality of education at the school.
