

Building a library management website for TT.Van Quan - Lang Son

Hoang Van Tien

Abstract: In the context of the increasing importance of information digitization and document management, this topic aims to research and implement a library management web system at the Center for Culture, Information, and Sports of Lang Son Province. The objective of the topic is to build a technical solution to optimize the management and retrieval of book and document information in the library. The research methodology includes conducting requirement analysis, designing user interfaces, and deploying the application on a web platform. The topic is expected to bring significant benefits in terms of management efficiency and serving the information needs of the community.

Keywords: Library management website, digitization, information system
