

Building an E-learning website to support English learning for students of Thai Nguyen University of Information and Communication Technology.

Phung Minh Tien

Abstract: In the context of increasing online learning, building an effective E-learning system to support English learning for students majoring in Information and Communication Technology (ICT) at Thai Nguyen University has become urgent. This project aims to develop an E-learning website with teaching modules, practice exercises, and an automatic assessment system to help students become autonomous in their English learning process. The research method is based on a combination of online education theory and web application development experimentation. Through the implementation and evaluation of the system, the project hopes to provide a flexible solution for improving the quality of teaching and learning.
