

Building an online movie streaming website on the Laravel Framework

Duong Van Tra

Abstract: In the context of the strong development of digital technology and the increasing demand for online entertainment content, building an online movie streaming web system has become essential. This topic focuses on the process of designing and deploying a web application that allows users to easily watch, rate, and share movies with each other on the Laravel Framework platform. By using a combination of theoretical research and experimental methods, this project not only provides a comprehensive technical solution but also contributes to the development of the entertainment web application ecosystem in Vietnam.
