

Build a shoe sales website for Duck Shop.

Ngo Quang Viet

Abstract: In the context of the increasingly developing online business environment, this project aims to build a specialized website system to serve the shoe sales needs of Duck Shop. Through theoretical and experimental research, the project combines modern web technology with specific customer requirements. The implementation of the application is expected to provide a more convenient shopping experience for users while optimizing the order management process for the shop owner. This project not only contributes to enhancing Duck Shop's competitiveness but also provides a sustainable solution for footwear businesses in the e-commerce sector.

Keywords: Shoe selling website, web technology, order management, e-commerce, Duck Shop store.
