

Building human resource management software for Glonics Thai Nguyen Co., Ltd.

Nguyen Van Duong

Abstract: In the context of the growing development of information technology and automation in business management, this topic focuses on designing and building a specialized human resource management software system for Glonics Thai Nguyen Co., Ltd. The main objective is to enhance the efficiency of human resource management by optimizing work processes, thereby contributing to increased productivity and reduced operational costs. The research method combines analyzing the actual business requirements with designing and deploying a software system based on modern technology platforms. The expected result is to provide Glonics with an effective human resource management tool, enabling the company to have a comprehensive view of its workforce and related activities, thus making smarter business decisions.
