

Build a fashion and GYM accessories e-commerce website using the Laravel Framework.

Ninh Ngoc Anh

Abstract: In the context of increasing digitalization, building an e-commerce system for GYM fashion and accessories products is necessary to meet customers' online shopping needs. This project aims to create an effective and convenient sales website using the Laravel Framework. Through a combination of theoretical research and experimentation, the project hopes to contribute to the development of web programming skills and provide practical solutions for businesses in the fashion and GYM sectors. The expected result will be a complete website that meets user interface requirements and e-commerce functionality.

Keywords: GYM fashion sales website, Laravel framework
