

Build a Reminder Daily application using the Flutter framework.

Le Thien Dung

Abstract: In this study, we set out to build a personal reminder system (Reminder Daily) using the Flutter Framework to meet users' needs for effective time management. Through analysis and design based on a combination of theoretical research and experimentation, the project successfully developed a mobile application with an attractive interface and diverse reminder capabilities. The results of the project not only contribute to the development of mobile technology but also provide a useful solution for daily life.
