

Build a book-selling website using the WordPress Framework

Noukhammanivong Etdy

Abstract: In the context of increasingly advanced digitalization, building an online book sales website system is extremely necessary to meet consumers' needs for finding and distributing books. This project aims to build a book sales website management system using the WordPress Framework to provide a convenient solution for publishers, authors, and readers. Through theoretical research combined with practical application deployment, this project hopes to contribute to the field of web engineering, while creating a flexible and easy-to-use online platform to serve the demand for selling books on the internet. The expected results from this project will affirm the effectiveness and applicability of WordPress in building e-commerce websites.
