

Building an Electronic Order System

Le Tran Thu Huyen

Abstract: This topic focuses on the necessity of implementing an Electronic Order system in management and law enforcement agencies. The goal is to build an intelligent, efficient system to process administrative orders more quickly and accurately. The research methodology includes both theoretical analysis of electronic administrative management and experimental deployment at local agencies. The expected results of the topic will provide new technical solutions for the administrative sector, improving productivity and the quality of public services.

Keywords: Electronic Command System, Electronic Administration, Law Enforcement, Effective Management, Information Technology
