

Building an e-commerce website for CellphoneS Hanoi store.

Bui Hieu Kien

Abstract: This topic focuses on building an e-commerce system to support the business operations of the CellphoneS Hanoi store. The context for choosing this topic is based on the strong development of e-commerce today and the need to enhance customer experience in mobile phone stores. The objective is to design and deploy a fully functional web interface that meets the requirements for product management, order management, and integration of a secure payment system. The research method is based on a combination of studying modern approaches in web development with experimentation to build the system. The expected result is to provide an effective solution for the CellphoneS Hanoi store, contributing to improving competitiveness and user experience.

Keywords: e-commerce, web development, sales management, online payment, mobile application
