

Build a sales website for Dai Thuan Computer using ASP.NET MVC.

Pham Hong Ky

Abstract: In the context of increasing digitalization in businesses, this topic aims to address the issue of management and market access more effectively by building a sales website management system for Đại Thuận Computer using ASP.NET MVC technology. The project's objective is to design and implement an intuitive, user-friendly interface while optimizing the online shopping process for customers. The research method is based on a combination of modern web development theory and experimentation to ensure the effectiveness of the built system. The expected outcome of this topic is to provide Đại Thuận Computer with a powerful tool to enhance its competitiveness in the digital market, while also contributing to the field of web application development research.

Keywords: E-commerce website, ASP.NET MVC, business management, web development, online business
