

Build a fresh vegetable selling application for KesoneOrganic farm using React Native Framework.

Kettavongsa Phonema

Abstract: In the context of increasing demand for safe and sustainable food, this topic focuses on building an information system to support KesoneOrganic farm in selling fresh vegetables online. The project aims to develop a mobile application using the React Native Framework to optimize the sales process and enhance service quality for customers. Through research, requirements analysis, user interface (UI/UX) design, and code implementation, the topic hopes to provide a flexible and effective solution for managing agricultural business at the farm.

Keywords: Mobile application, React Native Framework, selling fresh vegetables, sustainable agriculture, business management
