

Building the QuickChat chat application on the Android platform.

Phạm Ngọc Thủy

Abstract: In the context of messaging applications that are growing rapidly and dominating the field of digital communication, this topic focuses on building the QuickChat chat application for Android. The project's goal is to create a practical platform that allows users to quickly set up group conversations, leveraging open-source technology and optimizing user experience through an intuitive interface. Through a process of theoretical research combined with application deployment, the project not only creates a practical product but also contributes to the development of mobile programming techniques and digital communication solutions.
