

Build an application to update Covid-19 data and declare daily health monitoring.

Ma Thanh Toan

Abstract: In the context of the COVID-19 pandemic still evolving complexly worldwide, building an application for updating data and automatic health declaration for daily health monitoring becomes extremely important. This topic aims to solve the problem of efficient and secure health data management through a digital system. Through research, design, and deployment of the application, we expect to contribute to enhancing the ability to monitor community health status and support disease prevention and control efforts effectively.
