

Build a web application for selling computers for Nam Thanh Computer store.

Nguyen Huu Truong

Abstract: In the context of increasingly fierce competition in the phone and computer market, building an online sales system for Nam Thanh Computer store aims to improve business efficiency. This topic focuses on designing and deploying a web application to provide convenient and fast shopping services for customers. The research methodology includes requirements analysis, system design, and application deployment through experimental steps. Through this, the topic is expected to contribute a useful solution in expanding the business market and enhancing customer experience.
