

Building a sales website for Didongsmart

Le Anh Xuan

Abstract: This project aims to design and implement a professional e-commerce website system for Didongsmart company, meeting the modern demands of the mobile phone market. Through theoretical research on website design, practical experience, and the latest development trends, this project will provide a comprehensive solution from planning to building the user interface (UI/UX) and connecting with the content management system (CMS). The outcome of the project not only improves business performance but also contributes to sustainable development in the field of e-commerce information technology.

Keywords: Website sales, Didongsmart, UI/UX, CMS, E-commerce
