

Building English exam preparation software

Ngo Duy Son

Abstract: In the context of the increasingly urgent need to improve English skills, this topic focuses on building a software system to support practice and review. The objective of the topic is to develop an application that helps users enhance their English proficiency through diverse exercises and effective learning guidance. The research methodology includes needs analysis, user-friendly interface design, and application deployment based on knowledge of psychology and language education. The expected result is a system that is easy to use and highly effective in supporting users' review process.
