

Build a sales website for the electronics store Green Mobile Thai Nguyen.

Vũ Quang Linh

Abstract: In the era of rapidly developing information technology, building a professional e-commerce website has become an indispensable requirement for online businesses. This topic aims to research and design an e-commerce system to support Green Mobile Thai Nguyen store in improving operational efficiency. Through a process of theoretical research combined with experimentation, the topic will apply modern technologies such as HTML5, CSS3, JavaScript, and web development libraries to build a user-friendly interface for buyers. The project's goal is to create an effective online sales platform, helping Green Mobile Thai Nguyen expand its market and increase sales. Thereby, the topic will contribute to the digital development of the local electronics industry.

Keywords: E-commerce website, HTML5, CSS3, JavaScript, Information Technology
