

# **Build a website for Thanh Nam computer parts store.**

**Doan Thanh An**

**Abstract:** In the context of the increasingly developing online business environment, this topic aims to build a professional website system for the Thành Nam computer parts store. To meet the requirements for a user-friendly interface and effective management functions, the research applies modern web design principles along with advanced programming techniques. Through the implementation process, the project will significantly contribute to enhancing the store's competitiveness on the internet, while also opening up a new approach for the computer parts business sector in the current digitalization context.

**Keywords:** Website, Web programming, Online business, Computer components
