

Building an e-commerce website for Home & Lifestyle

Nong Thanh Binh

Abstract: In the context of a rapidly developing digital economy, building an e-commerce website for the Home & Lifestyle sector aims to meet the increasing demand for online shopping among consumers. The objective of this project is to design and implement an e-commerce web system that provides comprehensive services from product search to secure payment. The research methodology is based on a combination of experimentation and the application of modern technologies such as HTML5, CSS3, JavaScript, and web application development platforms like Node.js. The project aims to contribute a practical solution for businesses in the Home & Lifestyle industry, while enhancing the online business capabilities of related companies.

Keywords: e-commerce website, home and lifestyle, e-commerce, Node.js, HTML5
