

Research on performance evaluation of some next-generation firewalls, applied to deployment on the network infrastructure of Bao Thang New Technology Company - Hanoi

Hoang Trung Dung

Abstract: In the increasingly complex context of cybersecurity, the issue of information security is being prioritized. This topic aims to evaluate the performance of next-generation firewalls and apply their deployment on the network infrastructure of Bao Thang New Technology Company - Hanoi. Through a combination of theoretical research and experimentation, the topic seeks to determine the ability to protect information as well as optimize network performance. The expected results will contribute to improving the service quality and information security of the enterprise.
