

Building a network management solution on the Windows Server platform for the Viet Tra - Thai Nguyen supermarket system.

Tran Cong Khanh

Abstract: In the current context, the efficiency of network system management and operation in supermarkets is increasingly receiving attention. This topic focuses on building a network management solution on the Windows Server platform to optimize data management and network services for the Viet Tra - Thai Nguyen Supermarket System. Through research, the topic applies principles of information security and network system management to deploy this solution. The project's goal is to create a stable, secure, and easy-to-operate network environment. The expected results of this topic will not only enhance the organization's network management capabilities but also contribute to the development of the information technology industry in Vietnam.
