

Deploy network management solution on Windows Server platform for Lan Chi - Thai Nguyen supermarket system

Trieu Quang Toan

Abstract: In practice, managing and optimizing network systems in supermarkets is an urgent issue. This topic focuses on deploying a network management solution based on the Windows Server platform for the Lan Chi - Thai Nguyen supermarket system, aiming to improve operational efficiency and information security. This research combines both theoretical and experimental methods to evaluate the system's performance after deploying the new solution. Expected results include a significant improvement in data transmission speed, reduced downtime, and enhanced information security, meeting the requirements of modern network management.
