

Developing an electronic contact book application for Hoa Binh Primary School - Thai Nguyen

Tran Thi Cuc

Abstract: This topic aims to research and develop an electronic contact book application to more effectively serve communication between the school and parents at Hoa Binh Primary School, Thai Nguyen Province. The implementation of the topic is based on a combination of theoretical research on information technology with practical application deployment in schools. The topic hopes to contribute an advanced technical solution to improve communication quality and educational management efficiency, thereby enhancing the quality of teaching and learning in primary schools.

Keywords: Electronic gradebook application, Educational information technology, Education management, School-parent communication
