

Building human resource management software for Gold Group company.

Hoang Minh Duc

Abstract: This topic aims to meet the requirement of optimizing the human resource management process in enterprises through the development of a software system. With the goal of effectively solving the problem of organizing and classifying employee information, the system is designed based on modern management principles and advanced technology. The research process includes a phase of practical investigation at Gold Group, building a requirements model, deploying the application, and testing. The expected result is the enhancement of labor productivity through appropriate technical solutions, while also contributing to improving the company's human resource management efficiency.

Keywords: Human resource management software, Gold Group Company, Requirements model, Application testing
