

Build an e-commerce website to introduce mobile phones.

Pham Thi Ngoc Phuong

Abstract: In the context of the rapid development of information technology and m-commerce, building a professional e-commerce website to introduce mobile phone lines has become an essential requirement. This project aims to design and implement a website system to provide detailed information about mobile phone products, while enhancing user experience through online shopping features. The research method combines theories of website design with practical web application deployment. It is expected that this project will make a significant contribution to improving business efficiency in the e-commerce sector.
