

Building a teaching and learning support application for Informatics at Chua Hang 2 Secondary School - Dong Hy - Thai Nguyen

Luong Thanh Tung

Abstract: In the context of education increasingly focusing on technology integration, this topic aims to address the problem of how to enhance the effectiveness of teaching and learning Informatics at Chua Hang 2 Secondary School. Through a combination of theoretical research and experimentation, this project will develop a digital application to support teachers in the teaching process and students in self-study. The system is expected to include features such as electronic lectures, online interactive tools, and a performance evaluation system. By implementing this application, we hope to improve student engagement in the learning process, thereby enhancing the quality of information and communication technology education at the school.
