

Building a personnel management program using DotNet technology

Tran Hung

Abstract: The problem of evidence identification management is an urgent issue today in many fields such as security, healthcare, and banking. This topic focuses on building an evidence identification management program based on the DotNet technology platform to address the above problem. Through theoretical research combined with experimentation, the topic aims to provide an effective system for managing and analyzing identification data. The expected results are highly applicable in practice, contributing to enhancing the information technology management capabilities of enterprises.
