

Build a watch-selling website

Ly Thanh Huong

Abstract: In the context of an increasing number of consumers choosing to shop online, this topic focuses on building an e-commerce system for watch products. The main objective is to create an intuitive and convenient interface so that customers can easily search for and purchase a variety of watch models from different suppliers. The research method is based on a combination of web design theory and practical application development. It is expected that the implementation of this system will bring significant benefits to both customers and businesses by optimizing user experience and improving business efficiency.
