

Building practice exercises for the Manntel GT-19 Artificial Intelligence Training System.

Nguyen Dinh Chien

Abstract: In the context of artificial intelligence (AI) technology being widely applied, this topic focuses on building practice exercises for the GT-19 AI Training System developed by Manntel. The research aims to enhance the system's learning capability and optimize its performance through the creation of suitable practice exercises. The research methodology includes both machine learning theory and direct experimentation on the system, with the hope of making a significant contribution to the development of AI technology in general and the GT-19 system in particular.
