

Design of a wired cable television network for the Vincom Gia Lam building

Tran Duy Hieu

Abstract: The research aims to design and deploy a wired cable television network system for the Vincom Gia Lam building, meeting customers' multimedia entertainment needs. The research method applies theoretical modeling combined with practical analysis at the project. The expected result is a solution that optimizes the performance and reliability of the television network, contributing to enhancing user experience and developing digital infrastructure in the area.

Keywords: Cable television network, Vincom Gia Lam, Multimedia transmission system
