

Evaluation of OSPF routing protocol operation

Trieu Thi Thanh Xuan

Abstract: This is a study aimed at evaluating the effectiveness and stability of the OSPF routing protocol in an intranet. The topic focuses on analyzing and improving common issues encountered when using OSPF, while also building a test system to verify the proposed solutions. The research methodology includes both theoretical and experimental approaches to ensure the accuracy of the results. The expected outcomes will contribute to enhancing network service quality and the overall performance of the routing system.
