

Produce a video report about the Faculty of Electronic and Telecommunication Engineering using Adobe Premiere Pro.

Tran Trung Nam

Abstract: In the modern context, conveying information through images and sound is becoming increasingly important. This project aims to produce a video report introducing the Faculty of Electronics and Telecommunications Engineering at XYZ University using Adobe Premiere Pro. Through a combination of theoretical research and practical experimentation, the project provides students with essential skills in using professional software to produce high-quality video content. The expected outcome of the project is to contribute to raising awareness and understanding of the Electronics and Telecommunications Engineering field within the academic community and society.
