

Research on the operation, maintenance, and troubleshooting procedures of the Carestation 620 anesthesia machine with ventilator.

Nguyen Thi Ngoc Anh

Abstract: This topic aims to study the operation, maintenance, and troubleshooting procedures related to the Carestation 620 anesthesia machine with ventilator. The practical context highlights the need to enhance performance and safety in the use of this medical device. The objective of the research is to develop a comprehensive management process, from initial inspection to periodic maintenance and rapid troubleshooting. The research methodology combines specialized reference materials and clinical practice to ensure the comprehensiveness and currency of the information. The topic is expected to provide useful solutions for healthcare personnel, helping to improve the quality of healthcare services.

Keywords: Carestation 620 Anesthesia Machine, Operating Procedure, Maintenance, Troubleshooting
