

Analysis of the impact of component economic indicators on the economic growth of Thai Nguyen.

Tran Thi Anh

Abstract: This topic aims to analyze the impact of component economic indicators on economic growth in Thai Nguyen province. The practical context shows the necessity of understanding the relationship between economic factors and local economic development outcomes. The objective of the research is to build a mathematical model to evaluate this impact, through a combined theoretical and empirical approach. The method uses both statistical data and qualitative analysis to ensure the accuracy and reliability of the results. The expected results will contribute to more effective local economic policy planning.

Keywords: Economic growth, economic indicators, Thai Nguyen province, mathematical model, economic policy
