

Application of MS. Excel in managing business household license registration at Phu Binh District People's Committee - Thai Nguyen Province

Le Thi Luong

Abstract: This topic aims to study and apply Microsoft Excel software to enhance the efficiency of managing the registration and issuance of business operation licenses for household businesses in Phu Binh district, Thai Nguyen province. The context for selecting this topic stems from the current management work facing many difficulties in organizing, arranging information, and analyzing data. The objective of the research is to build a license registration management system using Excel to help administrative agencies process license applications quickly and accurately. The approach combines theoretical research on information management with practical application implementation on real data. The expected results will bring significant improvements in management work, increasing the efficiency of serving citizens and businesses.
