

Research on some key technologies of electronic payment in e-commerce and application at Teen House Thai Nguyen store

Nguyen Thi Phuong Quynh

Abstract: In the context of the strong development of e-commerce, electronic payment is increasingly becoming an indispensable trend. This topic aims to analyze and evaluate the main technologies in electronic payment to understand how to apply them in practice at the Teen House Thai Nguyen store. The main objective of the topic is to develop an effective electronic payment system that meets customer needs while improving business productivity. The research method combines theory and experimentation to ensure the practicality and feasibility of the proposed solution. Through this, the topic hopes to contribute a small part to the development of electronic payment technology in e-commerce in Vietnam.
