

Work plan management for departments at Quang Uyen District People's Committee, Cao Bang Province based on Vtask application

Nong Thi Xuan Huong

Abstract: In the context of administrative management increasingly demanding efficiency and intelligence, this topic aims to study and apply the work plan management system (Vtask) for departments at the People's Committee of Quang Uyen District. The objective of the research is to improve the planning and execution of work through optimizing time and resource management. The method combines theoretical analysis of project management with the practical deployment of the Vtask application. The expected results are to enhance work productivity, reduce information barriers, and strengthen coordination among departments. This topic contributes to the development of information technology in local administrative management.
