

Design of an optical signaling circuit for Hiep Hau Company Limited

PHADY Viladone

Abstract: This topic aims to meet the requirements for improving the communication information system of Hiep Hau Company Limited by designing an optical signaling circuit. The main objective is to build and deploy a fast, stable, and efficient data transmission solution using optical technology. The research method includes practical analysis, selection of appropriate technical solutions, circuit design, and system testing. The expected results will contribute significantly to improving the company's service quality while expanding opportunities for applying optical technology in related fields.

Keywords: optical display circuit, data transmission, optical technology
