

Design and construction of the department indicator system for building C1 – ICTU

Ngo Anh Tuan

Abstract: In the context of modern management, designing and implementing a system of indicators for departments is necessary to enhance work performance. This topic aims to build an optimal indicator system for Building C1 - ICTU through a thorough research process on the specific needs of each department. The approach includes synthesizing and analyzing current indicator models, then conducting experimental implementation to verify the effectiveness of the new system. The expected result is to provide a useful management tool, helping Building C1 - ICTU optimize operational processes and improve overall productivity.
