

Build a website guide on data security and safety.

Vu Quoc Bao

Abstract: In the context of increasing information security risks, this topic focuses on building a website that provides guidance on data security and safety, aiming to deliver basic and practical knowledge to users. The research method combines theory and practical application to create high-quality content while ensuring continuous information updates. The expected results will significantly contribute to raising awareness about data safety in the digital community.

Keywords: Security, website guide, data protection, digital community
