

Build a laptop repair guide website

Nguyen Thanh Luan

Abstract: This topic aims to address the practical need for accurate and detailed information about laptop repair procedures in Vietnam, thereby building a website system that provides detailed guidance for users. Through a combination of theoretical research and experimental implementation, the topic will develop a user-friendly website interface while providing accurate and up-to-date technical information. The goal of the topic is to contribute to enhancing the laptop self-repair capability of Vietnamese people, thereby reducing repair service costs and improving technological knowledge.

Keywords: Guide website, Laptop Repair, Information Technology, Technical Information Systems, Technology Knowledge
