

Research on the operation, maintenance, and troubleshooting procedures of the BS 480 Mindray biochemical analyzer

Le Trung Hieu

Abstract: This topic aims to analyze the practical context of operating, maintaining, and troubleshooting the Mindray BS 480 biochemical analyzer. The main objective is to develop an optimal procedure for this activity, based on a combination of theory and experimentation. Through research, the topic seeks to provide feasible solutions to enhance operational performance and minimize downtime, contributing to the improvement of healthcare service quality.

Keywords: BS 480 biochemical analyzer, Mindray, maintenance, troubleshooting, optimization procedure
