

Research on the operation and maintenance process of the Savina Drager intensive care ventilator

Phạm Thị Tú Uyên

Abstract: This topic aims to study and evaluate the operation and maintenance process of the Savina Drager intensive care ventilator in practice. The objective is to identify key factors affecting the device's operational efficiency, while developing technical maintenance guidelines to improve the quality of medical services. The research method combines theory and experimentation to provide a comprehensive solution for maintaining the equipment in optimal condition. The expected outcome is a significant contribution to improving the performance of the respiratory system and enhancing the quality of healthcare in hospitals.

Keywords: Intensive care ventilator, Savina Drager, operating procedure, technical maintenance
