

# **Design and operation of the rotary conveyor system of TKR company**

**Truong Van Tuan**

**Abstract:** This topic focuses on designing and implementing an efficient rotary conveyor system for TKR Company. The aim is to optimize the production process, enhance productivity, and reduce operational costs. The research methodology includes assessing the current status, analyzing actual needs, and testing technical solutions. The objective is to build an advanced rotary conveyor system that meets production process requirements while ensuring safety and stability. The expected results will significantly contribute to improving the company's production operations.

**Keywords:** Rotary conveyor system, TKR Company, Productivity improvement, Process optimization, Operational control
