

Building a voice-controlled device system using Google Assistant.

Hoang Duc Thang

Abstract: In the context of increasingly advanced information technology, performing tasks by voice has become popular. This topic focuses on building a voice-controlled device system based on Google Assistant. The objective of the topic is to solve the problem of intelligent communication between users and the system through voice technology. The research process includes identifying requirements, deploying the application, and conducting practical testing. The expected result is an efficient control system that meets user needs in areas such as home, office, or car. This topic will contribute to the development of voice technology in daily life.

Keywords: voice, Google Assistant, control system, smart communication
