

Design of the starting system model for the 2013 Toyota Yaris car.

Nguyen Manh Linh

Abstract: This topic is carried out to research and design a new starting system model for the 2013 Toyota Yaris, meeting the demand for energy saving and optimizing engine performance. Through technical analysis, solution selection, and practical testing, the topic hopes to contribute a new approach to automotive starting technology. The research results are expected to provide a suitable starting system design solution for the 2013 Toyota Yaris model, aiming to improve performance and fuel efficiency.

Keywords: Starting system, Toyota Yaris, new technology
