

Building an online payment system for the enterprise's ERP.

Phạm Văn Điệp

Abstract: In today's digital age, building an online payment system has become crucial for businesses to enhance information management efficiency and business processes. This topic aims to address the problem of applying ERP technology in deploying an effective online payment system, thereby improving customer experience and optimizing internal workflows. Through a combination of theoretical research and experimentation, the topic hopes to contribute to the development of technical solutions that support online business operations for enterprises.
